

SafeBreach: Marketing Operations Continuity Map

PUBLIC-SIGNAL REVIEW / PREPARED 2026-07-14 / SURREY, BC

EMERGENT-LOGIC.CA

PUBLIC SIGNAL

A defined four-month coverage window

SafeBreach's temporary Marketing Operations brief spans HubSpot and Salesforce administration, database health, attribution, alerts, forms, reporting, webinars, and investigation of AI workflows.

INFERENCE TO VALIDATE

Continuity and handoff are the controls

The lowest-risk bridge keeps recurring work reliable, avoids unreviewed system changes, and leaves evidence that a returning or permanent owner can use immediately.

DECISION QUESTION

Which failure creates the most near-term pipeline risk: capture and routing, campaign execution, attribution, or reporting?

FIRST TEN WORKING DAYS

Keep work moving and leave a controlled handoff

01

Control plane

List owners, access boundaries, critical systems, schedules, integration dependencies, and escalation routes before changing automation.

02

Recurring operations

Confirm the calendar and acceptance checks for campaigns, webinars, lists, forms, alerts, reports, and high-impact workflows.

03

Revenue path test

Trace a small sample from inbound capture through lifecycle assignment, routing, Salesforce visibility, follow-up, attribution, and reporting.

04

Handoff ledger

Record decisions, observed exceptions, workflow changes, unresolved risks, owners, and next review dates as work happens.

LOW-RISK DELIVERABLES

The bridge should leave five usable outputs

- System, process, and ownership map.
- Critical workflow and integration inventory.
- Recurring operations calendar with acceptance checks.
- Evidence from one inbound-to-opportunity path test.
- Prioritized risk backlog and end-of-coverage handoff pack.
