

EviSmart: Revenue Systems Pre-Hire Stabilization Map

PUBLIC-SIGNAL REVIEW / PREPARED 2026-07-14 / SURREY, BC

EMERGENT-LOGIC.CA

PUBLIC SIGNAL

A broad RevOps build mandate

EviSmart's live Vancouver role asks one owner to build Marketing Ops, Sales Ops, Success Ops, and BizOps; govern HubSpot; reconcile billing and finance; improve forecasting; establish customer-health and renewal visibility; and design integration architecture.

INFERENCE TO VALIDATE

Build evidence before redesigning

The highest-risk period is the handoff between current operators and the incoming RevOps owner. A short evidence-building sprint can give that person a reliable starting point without changing automation prematurely.

DECISION QUESTION

Which path carries the most near-term revenue risk today: lead-to-opportunity, quote-to-cash, or renewal?

FIRST TEN WORKING DAYS

Create a controlled handoff, one path at a time

01

Control plane

List the systems and owners for lead, opportunity, contract, billing, customer health, and revenue. Decide which system is authoritative for each critical field.

02

Revenue path

Walk a small sample from inquiry to closed-won and from customer to renewal. Record stage criteria, ownership changes, SLA expectations, and exceptions.

03

Workflow reliability

Inventory the highest-impact workflows, integrations, dependencies, and failure alerts. Test one path with acceptance criteria before changing automation.

04

Leadership visibility

Reconcile a baseline set of pipeline and recurring-revenue metrics. Document definitions, refresh timing, and accountability for each metric.

LOW-RISK STARTING POINT

A fixed-scope diagnostic should leave five usable outputs

- Source-of-truth and field-ownership matrix.
- Map of one lead-to-revenue or renewal path.
- Prioritized workflow and data-risk backlog.
- Acceptance checks for the first implementation sprint.
- Concise handoff pack for the permanent RevOps owner.
